No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3,

Sequence 1519, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
APPLICANT: GARY ERETON
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: US/09/543,681A
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT PAPLICATION NUMBER: US 60/128,706
FRIOR APPLICATION NUMBER: US 60/128,706
FRIOR PILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 1519
LENGTH: 1386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Sequence 300, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BUNDANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRENCE: GTC99-03PA
CURRENT PELICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 724, Application US/09134000C

Patent No. 6605709

GENERAL INCORMATION:
APPLICANT: GARY BRETON

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL

FILE REFERENCE: 2709-1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT FILING DATE: 1999-04-05

PRIOR FILING DATE: 1999-04-09
                                                                                                                                                                                                                                                   RESULT 6

GENERAL INFORMATION:

APPLICANT: Jones, Robert

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: AND DIAGNOSIS OF OVARIAN CANCER

TILE REFERENCE: 21011.497

CURRENT APPLICATION NUMBER: US/09/867,701

NUMBER OF SEQ ID NOS: 10912

SOFTWARE: FastSEQ for Windows Version 4.0

SOFTWARE: 143

TYPE: DNA

CORGANISM: Homo Sapien

i GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Laing Lance

TITLE OF INVENTION:

CURRENT PILING DATE: 100/11443-US1

CURRENT PILING DATE: 2002-08-15

PRIOR PILIATION NUMBER: US 60/313,714

PRIOR PILING DATE: 2001-08-20

NUMBER OF SEQ ID NOS: 13

SOFTWARE: Patentin version 3.1

SOFTWARE: Patentin version 3.1

SOFTWARE: PATENTIAL SEQUENCE

COTHER INFORMATION: CHROMSIT top, short biotinylated oligo sequence; Diotinylated

OTHER INFORMATION: CHROMSIT top, short biotinylated oligo sequence; PEATURE:

OTHER INFORMATION: Uncleotide at position 1

US-10-222-952A-9

Publication No. US20020198371A1
GENERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129
CURRENT APPLICATION NUMBER: US/10/027,632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PRST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixeroorganisms that inhabit
the gut. The DNA is derived from mixers of larvae. The BAC
library was constructed at Texas AkM University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
partial digest.

                                                                                                                                                                                                                                                   /nce="Vector: pBluescript II SK-; Site 1: BCORI; Site 2: XhOI; This library, constructed by John Davies and Jeffrey McDermott, combines cDMAs from CC-1690 cells grown to mid-log phase in TAPP (acetate-containing) medium in the midth. TAP medium in the dark, HS (minimal) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. POLYA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned and cDNA ZAP II (Stratagene) in the BCORI (5') and XhOI (3') sites. PBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with Exabsist (Stratagene) phase. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806.*

Sequences have been trimmed to exclude PolyA, vector, and regions
Sequences have been trimmed to exclude PolyA, vector, and regions
below Phred quality 16. The threshold for highest quality sequence
is 20. Three-primer sequences, which are obtained with PolyTMix or
T7 sequencing primer, are presented as the reverse complement.
Seq primer: T7
High quality sequence start: 45
High quality sequence stop: 524

Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk -, This Drosophila melanogaster BAC | http://www.edgp.ebi.ac.uk - Alian Billaud at CEPH (Centre d'Ebude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CNS00Z0H 1101 bp DNA linear GSS 26-JUL-1999 Drosophila melanogaster genome survey sequence T7 end of BAC BACWO1003 of DrosBAC library from Drosophila melanogaster (fruit AL097067
